**DETAILED ACTION**

1. This office action is in response to Pre-Amendment filed on April 23, 2003.
2. Claims 1-61, 74-80 have been cancelled.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 62-73 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimoto et al. (6,115,611).

Regarding claims 62, 67, Kimoto et al. discloses a mobile communication system, and a mobile terminal, an information center and a storage medium used therein comprising providing a database of information of the wireless network (see fig.3, element 24B and its description); one of the users entering a trip route to a GPS system in the one user's vehicle (see fig.3, element 1F, 11f and its description); said vehicle querying the database to download the information in the trip route (see fig.3, element 14F and its description). Although Kimoto does not clearly state the information retrieve from information center 2B are dead zones or non-operating areas. However, Kimoto provide map information of area, according to techniques which are within the skill of the ordinary artisan. Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use this technique to provide the

dead zones information or non-operating areas in information center in order to improve the use of telecommunication services in GPS system.

Regarding claims 63-64, 68-69 Kimoto et al. further comprising the map on a GPS screen (see fig.8, element 42a, col.1, lines 45-54 and its description).

Regarding claims 65-66, 70-73 Kimoto et al. further comprising the indicating the current position of the user (see col.2, lines 4-12).
